

CON-DEK SYSTEM

Waterproofing for Use on Above Grade Concrete Surfaces

POINTS OF INTEREST

Multi-Purpose

The Con-Dek system is a fiberglass reinforced, acrylic waterproof membrane for above grade concrete as well as post tension slabs. The Con-Dek system is excellent for new construction as well as reconstruction. Contact Pli-Dek Systems, Inc. for complete details.

Durable and Flexible

The elastomeric properties of the PD Resin allow for elongation, providing a flexible waterproof membrane, while the poly-acrylic knockdown texture provides a durable traffic coating.

Lightweight

The Con-Dek system is less than 1/4" thick making it excellent for retrofit/reconstruction above grade waterproofing projects, with the ability to use at most any threshold heights.

Low Maintenance

The Con-Dek system requires little maintenance. Most finishes will clean up with soap and water.

Skid-Resistant

The Finish Coat can be applied to create a non-skid surface. It has passed the ASTM C-1028-96 test for Static Coefficient of Friction.

Quality

PD Resin is a high build acrylic material designed for superior adhesion and the ability to bridge substrate cracks up to 1/8". The .75 oz. fiberglass chopped strand mat creates strength and durability.

UV Resistant

The Con-Dek System has excellent resistance to harmful ultraviolet rays.

Finish Options

Con-Dek offers fifteen standard colors. Custom colors are also available. Ask your Pli-Dek representative about custom finish options.
